

Why does it matter where our food comes from?

Think carefully how no country can produce all the foods it needs by itself as they're not grown/found in equal amounts around the world.

Countries need to buy and sell foods with other countries.

Consider the environmental impact (carbon dioxide emissions), waste produced, greenhouse gases emitted in greater detail

Follow the link <https://climatekids.nasa.gov/greenhouse-effect/> which explains the greenhouse effect and discuss the causes and implications of the greenhouse effect.

How does the importation and exportation of food contribute to this?

Task: Create a poster of the greenhouse effect and annotate.

Key vocabulary: **emissions, atmosphere, carbon dioxide, producer, consumer, food miles import, export and greenhouse gases.**
